

Demo Service Portal - Restart Service

SANITIZED DEMO COPY - All organization names, IP addresses, hostnames, database identifiers, URLs, contacts, and screenshots have been removed or replaced with synthetic example values.

Purpose

This document describes the operational steps for handling an unexpected condition that requires an application service to be restarted.

Trigger

No	Condition	Require Approval / Decision?	Notes
1	Issue based	No	Each trigger represents an independent operational condition.

Access Information

1. Access GUI

Application	URL	Access
Monitoring Console	https://portal.example.invalid	Authorized User

2. Access DB

Application	IP	Port	SID / Database	Access
Demo Service DB	192.0.2.10	5432	demo_service_prod	Authorized User

3. Access Server

Application	Type	IP	Hostname	Access
Queue Server	OS	192.0.2.21	demo-queue-01	Authorized User
Backend Service	OS	192.0.2.22	demo-app-01	Authorized User
Backend Service	OS	192.0.2.23	demo-app-02	Authorized User
Gateway Service	OS	192.0.2.24	demo-gateway-01	Authorized User
Gateway Service	OS	192.0.2.25	demo-gateway-02	Authorized User

Activity Steps

1. Access the authorized application server.
2. Switch to the designated application service account.
3. Access the service directory /opt/demo-service.
4. Run: sh restart.sh

Success Criteria

The service is restarted successfully and returns to an UP / healthy state.

Escalation Flow

Problem	PIC	Contact
---------	-----	---------

Server cannot be accessed	Infrastructure Team	Internal support channel
---------------------------	---------------------	--------------------------
